PERFORMANCE WORK STATEMENT

Analytical Chemistry Laboratory Services Supporting the Unregulated Contaminant Monitoring Program

1.0 Background

The United States Environmental Protection Agency's (EPA) Office of Water (OW), specifically OW's Office of Ground Water and Drinking Water (OGWDW), is responsible for implementing the provisions of the Safe Drinking Water Act (SDWA) Amendments. OGWDW also participates in multi-media program activities conducted by several other EPA offices. Under the SDWA, OGWDW develops regulations and programs to protect the public health from contaminated drinking water and groundwater.

EPA is responsible for investigating chemical, radiological and microbiological contaminant occurrence in an effort to characterize drinking water threats. EPA relies on independent research efforts (e.g., United States Geological Survey [USGS] studies) and is heavily engaged in conducting occurrence studies to obtain new data. The largest occurrence study is the monitoring program mandated by the Unregulated Contaminant Monitoring Rule (UCMR). The UCMR is a 5-year cyclic monitoring program that allows OGWDW to evaluate contaminant occurrence in finished drinking water. Every five years, the UCMR is redefined through regulatory proposal and promulgation. Monitoring results collected under the UCMR are correlated with population data to obtain an exposure assessment for each contaminant. If warranted, exposure information from the UCMR is then combined with health effects and water treatment control information to determine a maximum contaminant level (MCL) for a contaminant as a National Primary Drinking Water Standard (NPDWS). This sound science strategy provides the basis for maximizing public health protection.

In the provisions of the 1996 Amendments to the SDWA, there were measures to revise the unregulated contaminant monitoring program. The revised program no longer falls under state primacy, but EPA has implementation responsibility (though states provide significant assistance through Partnership Agreements). Within the revised program, no more than thirty (30) contaminants are selected for monitoring within a 5-year UCMR cycle. EPA has implemented two cycles of UCMR under the revised program, with a third cycle (UCMR3) beginning in 2013 and ending in 2015.

This Task Order (TO) is issued to Babcock Laboratories, Inc. (EP-C-13-004). Price per analysis cannot exceed rates listed in the contract.

2.0 Purpose

The purpose of this TO is to establish laboratory services under the UCMR implementation program. The laboratory services entail conducting the analysis of samples collected at selected small water systems. For the proposed price of these analytical services, the contractor shall supply all necessary labor, materials, equipment and facilities in technical support of the program areas listed herein. The contractor may be tasked with multiple task orders concurrently, and at times these may be of a quick response nature. This TO will require analyses for methods specified under Assessment Monitoring – List 1 (see Table 1: List 1 Methods). This TO will require analysis of five extra analytes beyond the List 1 analytes selected for UCMR3. Analytes and methods are listed in Table 1. No Screening Survey – List 2 analyses will be required under this TO. Screening Survey monitoring for small systems will be scheduled in 2014-2015.

3.0 Scope of Work

The contractor will be required to have UCMR 3 lab approval from EPA for all chemical methods (Tables 1 and 2). The contractor shall provide support in the following areas: (1) laboratory analyses; (2) reporting quality control and sample data; (3) logistical support; and (4) monthly progress and quality control assessment reports.

In addition to the specified tasks, the contractor shall maintain all records and documentation associated with the preparation and analyses of samples under this contract for a minimum period of three (3) years beyond the expiration of the task order. Should such additional information be required during that period, the contractor shall provide the information to the Government at a reasonable cost (to be determined at that time).

Work under this contract will be limited to the types of activities specified in the following sections:

3.1 Laboratory Analyses

The contractor shall analyze water samples in accordance with the procedures detailed in the specified analytical methods provided by EPA (see Tables 1 and 2), as well as the *UCMR3 Laboratory Approval Requirements and Information Document* (January 2012, Version 2.0). All procedures specified in the methodology must be followed as detailed in the provided analytical method unless prior approval to deviate has been granted in writing by the Task Order Project Officer or Project Officer. Laboratories that deviate from the analytical methods provided, without first obtaining written permission from the EPA Project Officer or Task Order Project Officer may be liable for the cost of the analyses and responsible for costs associated with recollection of the sample(s).

3.1.1 UCMR 3 Contaminants – The contractor shall analyze water samples for

assessment monitoring contaminants listed in UCMR 3. The contaminants and methods are identified in Table 1.

3.1.2 Additional Contaminants – The contractor will also analyze five additional contaminants not included in UCMR 3 assessment monitoring. These contaminants are included in the approved UCMR 3 methods. These contaminants include: sec-butylbenzene (EPA 524.3), n-propylbenzene (EPA 524.3) manganese (EPA 200.8), tellurium (EPA 200.8), and germanium (EPA 200.8).

3.2 Quantity of analyses ordered:

For this Task Order:

Quantity of analyses	Method
2000	EPA Method 200.8
1500	EPA Method 300.1
1500	EPA Method 218.7
900	EPA Method 522
900	EPA Method 524.3
1000	EPA Method 537

These analyses include field samples, laboratory fortified sample matrices, laboratory fortified sample matrix duplicates and field blanks. Field blanks will qualify for payment only if an associated field sample with detection >MRL is also reported. Analyses must be conducted following the procedures specified in the methods and the *UCMR3 Laboratory Approval Requirements and Information Document* (January 2012, Version 2.0) unless prior approval to deviate has been granted in writing by the Project Officer or Task Order Project Officer.

3.3 Logistical Support

Samples will routinely be shipped to the contractor via an overnight express delivery service. The contractor shall be available and have the capability to receive, log and properly store all delivered samples. Sample delivery during a typical week should be expected from Tuesday through Friday (no Saturday deliveries).

The contractor shall package and return all undamaged sample shipping containers and reusable contents. These shall be returned to the sampling coordinator by ground courier using the shipping account provided by EPA. The contractor shall also return all sample tracking forms associated with samples to the sampling coordinator. The contractor shall return all undamaged shipping containers, reusable contents, and sample tracking forms within thirty (30) days of sample receipt. Scanned copies of sample tracking forms sent via email will also be sent to the parties identified in the communication strategy found in Attachment 1.

4.0 Deliverables / Reporting Requirements

4.1 Reporting quality control and sample data.

Data for all sample analyses and related quality control samples (e.g., field sample, spiked sample, laboratory fortified blank, continuing calibration results, etc.) are to be reported electronically to the EPA using the format specified in Attachment 2. EPA will electronically validate reported data in accordance with method procedures. In addition, the contractor shall be subjected to annual on-site audits of its laboratory and facilities.

The contractor shall concurrently report to the EPA all data for a specific array of samples, collected from an individual Public Water System, for a specific collection event. The contractor shall not report partial sets of analytical data (i.e., all analytes must be reported for a given method/sample – reporting of a subset of analytes is not allowed). The timeliness of submitting these results to EPA is specified in the QASP for task 4.1.

The contractor shall notify EPA when there is a laboratory problem that results in the inability to report acceptable data for a sample. Notification should be e-mailed to the Task Order Project Officer with “QC Problem” in the subject line as soon as possible after the problem is discovered. A copy should also be e-mailed to the Project Officer and the EPA UCMR Sampling Coordinator. If re-analysis of samples affected by Quality Control failures (ie, insufficient sample volume remaining for reanalysis, holding time expired, other QC failures, etc) is necessary, EPA will be notified on the same day or within one day following the discovery of the QC failure.

4.2 Reporting sample receipt information

The contractor shall notify EPA of Sampling/shipping errors or discrepancies on the same day or within one day following the receipt of samples. Problems may include, but are not limited to, such items as broken bottles, empty bottles, samples above temperature specifications, bottle labels not matching the kit number on the shipping box or sample chain of custody form or no information concerning disinfectant type. Notification of the problem should be e-mailed to the EPA Task Order Project Officer with “Sampling Error” in the subject line. A copy should also be e-mailed to the EPA Project Officer, the EPA UCMR Sampling Coordinator, and EPA’s Implementation Contractor.

The contractor shall submit a weekly report based on an Excel spreadsheet that EPA sends to the lab which indicates the planned sampling schedule. The laboratory shall provide information for each sample kit received concerning sample collection date, sample receipt date, and comments concerning sample receipt. The laboratory shall also verify that the chain of custody form matches the sample kit ID and will notify EPA if there are any discrepancies. Any problems with the aforementioned items will be noted in a comment in the spreadsheet. The sample schedule spreadsheet will be provided in advance with blank fields for “sample receipt date,” “disinfectant residual,” and a “comment” field for recording any sample receipt problems. The format of the spreadsheet must be maintained as provided by EPA, so that it can be uploaded into EPA’s sample tracking data system once completed and returned via e-mail to EPA by the lab

contractor. The spreadsheet should be e-mailed to TSC-UCMR.CI@epa.gov with the subject line “weekly update YYMMDD” and a copy should also be e-mailed to EPA’s Implementation Contractor.

4.3 Monthly progress and quality control assessment reports

The contractor shall submit a Monthly Progress and Quality Control Assessment Report in an electronic MS Word or Adobe PDF format, to the Task Order Project Officer, the Project Officer and the Contracting Officer. This report must detail activities toward fulfilling any of the above tasks, as defined in the Task Order, which were performed during the past month and billed to the contract. This report shall be submitted on or before the 20th day of the succeeding month. The format of the report is specified in Attachment 3.

Prior to submission of the monthly invoice, the contractor must submit to the Project Officer and Task Order Project Officer a draft task order invoice report that lists (by method) all samples that will be included on the invoice. The list should include the sample ID numbers for field samples, laboratory fortified sample matrices, laboratory fortified sample matrix duplicates, and necessary field blanks analyzed and reported to EPA during the previous month. EPA will only pay for an analysis that provides acceptable data for all of the UCMR analytes included in the method, with the exception of the “extra analytes” identified in Table 1. If an analysis is not acceptable, related solely to one of the “extra analytes”, acceptable results for the remaining required analytes shall be reported. Within 14 days of receipt of the draft task order invoice report, EPA will confirm that the data from the samples listed have been successfully reported to EPA by the contractor.

4.4 Invoicing for this and other active TOs

The contractor should exhaust the funding of this Task Order for analyses by each method prior to initiating invoicing toward future Task Orders for the same method.

The contractor should submit invoices specific to the applicable task order. Charges on the invoice should be separately subtotaled for each respective method covered by the Task Order.

4.5 Quality Assurance

The contractor shall submit a UCMR 3 Programmatic Quality Assurance Project Plan (PQAPP). The PQAPP shall meet all the QA requirements as described in this Performance Work Statement and FAR clause 52.246-11.

**Table 1: Assessment Monitoring Methods and Analytes
(List 1 Methods)**

Volatile Organic Compounds <u>EPA 524.3</u>		
Analyte	CAS Number	MRL
1,2,3-trichloropropane	96-18-4	0.03 µg/L
1,3-butadiene	106-99-0	0.1 µg/L
chloromethane (methyl chloride)	74-87-3	0.2 µg/L
1,1-dichloroethane	75-34-3	0.03 µg/L
n-propylbenzene ¹	103-65-1	0.03 µg/L

UCMR 3 Text File Specifications for Chemical Analyses

For EPA contract laboratories supplying UCMR 3 analytical services for small system samples

I. Introduction

This document provides the specifications for submitting UCMR 3 small system data to EPA-TSC in a tab delimited text file format, reported via email to EPA-TSC. These data will be uploaded into a data system managed by TSC. Laboratories will be reporting analytical results for field samples as well as supporting QC data for those samples. These data submissions are required for EPA to QC review laboratory results, validate laboratory invoices and report these analytical results to small systems.

II. Text File Specifications and General Rules

A. Glossary of terms:

Field name – A category of information that pertains to all records. Many fields make up a record.

Primary keys – A group of field names (identified in bold in Table 1) that uniquely identify a record within the text file.

Record – A collection of fields in the text file with unique primary keys that clearly define an individual result for an analyte within a specific sample.

Text file – A collection of records containing results that must conform to the format specified in this document.

TABLE 1 - Text File Specifications (primary keys in bold):

This table specifies the fields used to build an individual record within the text file. The tab delimited text file submitted to EPA should contain many records. Laboratories should generate the text file using an automated process, ideally from their Laboratory Information Management System (LIMS). These text files are required deliverables under the UCMR 3 laboratory services contract.

<u>Field name</u>	<u>Field type</u> <u>[size]</u> <u>Requirement</u>	<u>Description</u>
LabID	Text [7] Required	EPA LabID number.
CreateDate	Date Required	Date the text file was created (MM/DD/YYYY). Use only one file creation date per text file. Must be within 5 calendar days of delivering the text file to EPA.
SampleKitID	Text [20] Required	For Field Samples (FS), Field Blanks (FB), Lab Fortified Sample Matrix (LFSM) and Lab Fortified Sample Matrix Duplicates (LFSMD): Must contain the SampleKitID supplied by EPA. For all QC sample types (as identified in Table 2), must contain a unique name assigned by the laboratory within an analysis batch.
CollectionDate	Date Not Required	Date the sample was collected by the PWS (MM/DD/YYYY). Only used when the sample type is FS, FB, LFSM and LFSMD. For all other samples, leave this field null.
SampleTypeID	Text [10] Required	Designates if this record is a field sample (FS) or a specific type of QC sample. Only SampleTypeIDs found in Table 2 may be used.
MethodID	Text [20] Required	The method used to analyze the sample. Allowable MethodIDs are found in Table 3.
AnalyteID	Text [8] Required	Indicates the analyte for which data are being reported. Allowable AnalyteIDs are found in Table 3.
ExtractionBatchID	Text [50] Required	Laboratory assigned extraction batch ID. Must be unique for each extraction batch within the laboratory for each method. For CCC samples, report the AnalysisBatchID as the value for this field. For methods without an extraction batch, leave this field null.

Contract EP-C-13-004 – Babcock Laboratories, Inc.
Attachment 2 Text File Specifications

ExtractionDate	Date Required	Date for the start of the extraction batch (MM/DD/YYYY). For methods without an extraction batch, leave this field null.
AnalysisBatchID	Text [50] Required	Laboratory assigned analysis batch ID. Must be unique for each analysis batch within the laboratory for each method.
AnalysisDate	Date Required	Date for the start of the analysis batch (MM/DD/YYYY).
MeasuredValue	Number [10, no more than 5 after the decimal point.] Required	The analytical result. Units of measurement and MRLs are included in Table 3. <ul style="list-style-type: none"> • Less than MRL analyte concentrations for field samples (FS) are reported as 0. • Any measured analyte concentrations for quality control (QC) are reported. • Internal standard and surrogate standard results are presented as % recovery based on the initial calibration curve. Do not report the % sign, only the value for recovery.
AdditionalValue	Number [10, no more than 5 after the decimal point.] Not Required	Represents the true value or the fortified concentration for spiked samples for QC SampleTypeIDs (CCC, EQC, LFB, LFSM, and LFSMD). For SampleTypeIDs FS, FB and LRB, as well as IS and surrogate QC AnalyteIDs, leave this field null.
PWSID	Text [9] Not Required	The PWSID of the public water system for SampleTypeIDs FS, LFSM or LFSMD.

TABLE 2 - SampleTypeID

This table defines the different sample types that must be reported to EPA. (The following table may be expanded)

<u>SampleTypeID</u>	<u>Sample Type</u>	<u>Description</u>	<u>AdditionalValue</u>
CCC ⁽¹⁾	QC	Continuing Calibration Check	True Value
EQC	QC	External Quality Control	True Value
FS	FS	Field Sample	Null
LFB	QC	Lab Fortified Blank	True Value
LFSM	QC	Lab Fortified Sample Matrix	Spike Concentration
LFSMD	QC	Lab Fortified Sample Matrix Duplicate	Spike Concentration
LRB ⁽²⁾	QC	Lab Reagent Blank	Null
FB ⁽³⁾	QC	Field Blank	Null

Notes:

- (1) CCC is a parameter in which the AdditionalValue field will be used to determine the Low/Med/High criteria. Laboratories should use the SampleKitID field to name the sample to specify the CCC as Low, Med, or High. Laboratories are permitted to uniquely develop a SampleKitID reference for their CCC samples based on their experience and the function of their LIMS.
- (2) The Lab Reagent Blank (LRB) must have no interference or contaminant measurement >a MRL. LRBs that fail this QC criterion for a contaminant invalidate all results for that contaminant in all samples included in both the extraction and analysis batch and cannot be reported. Immediately notify EPA if the LRB fails for any contaminant. LRBs that pass this QC criterion must be reported with the contaminant MeasuredValue as zero (0).
- (3) The Field Blank (FB) must be analyzed if a target analyte is found in a field sample. The FB must have no interference or contaminant measurement >a MRL. FBs that fail this QC criterion invalidate field samples collected with that FB, and both the FB and the field sample need to be recollected, but should still be reported. FBs that fail the QC criterion must be reported with the actual contaminant MeasuredValue. FBs that pass this QC criterion must be reported with the contaminant MeasuredValue as zero (0).

Notes:

⁽¹⁾ This listing includes method internal standard or surrogate analytes that may extend beyond the specific requirements of the method but have been included as potential alternates. Some may not be required.

- (2) Analyte codes starting with "T" signify this is a method internal standard compound.
- (3) %Recovery is calculated based on the initial calibration curve.
- (4) Analyte codes starting with "S" signify this is a method surrogate compound.

B. General Rules in Preparing the Text File:

1. **Data fields within a record must be separated by a tab (tab delimited).**
2. **Data fields must not be enclosed in quotation marks.**
3. **Records must terminate at the end of the row with a hard return.** Hard returns must only be used at the end of a record.
4. **The first record in the file must be a Field Sample (FS) sample type, with no null fields.**
5. **The primary keys in each record uniquely identify that record.** If a text file contains multiple records with the same primary keys, then only the replicate record with the most recent CreateDate is loaded to the data system. This is critically important if a laboratory analyzes two identical QC samples within the same extraction and analysis batches. For example, if two MRL level continuing calibration check standards [CCC] are analyzed in the same batches, and reported using the same primary keys, only one set of CCCLow data will load for that analysis batch. (i.e., using the same SampleKitID field name as "CCCLow" and the same Additional Value for a specific analytical batch.) Duplicating primary keys will result in the potential for an apparent QC violation for insufficient calibration check standards when EPA reviews the data. In cases where replicate QC samples are used, laboratories **must** use a unique reference name for the SampleKitID field, e.g., using CCCLow1 and CCCLow2.
6. **Each text file must contain multiple records.**
7. **Null fields contain no data.** To leave a field null, place two adjacent tabs with neither alphabetic nor numeric entries between the tabs. Do not include spaces in null fields.
8. **The submitted text file name must follow the format:**
LabID_YYMMDD.txt (LabID-underscore-File Creation Date)
For example, **OH12345_130814.txt** for a file created on 8/14/13 by LabID OH12345.
9. **Replicate records will be overwritten.** If a submitted text file contains a duplicate set of primary keys that currently exist in the TSC database as a result of a previous text file submission, then the record in the most recently submitted text file will replace the previous record in the TSC database. Do not submit replicate records, unless the intention

is to overwrite previously reported results. Records with unique primary keys are appended to the TSC database.

III. Guidelines for Determining Which Data Are Included in Text File

A. Billable Samples:

1. **The text file must contain analytical data for all billable samples** (e.g., FS, FB, LFSM, and LFSMD). A sample is defined as billable when all QC requirements are met for the extraction and analysis batch. The analytes may be analyzed in separate batches in order to meet QC requirements for the entire sample (e.g., if the CCC for one contaminant failed invalidating the analytical batch for that contaminant, but upon corrective action, a second analysis batch yielded acceptable results for that contaminant, that subsequent analytical batch of data could be reported for that specific contaminant.) Laboratories will be provided sufficient sample volume to prepare LFSM/LFSMD pairs using sample matrices provided by EPA. EPA specifically requests the LFSM/LFSMD data from our field samples, and will compensate laboratories for those QC analyses. Do not substitute other client PWSs sample matrices to prepare LFSMs and LFSMDs for batches containing EPA samples!
2. For surrogate and/or internal standards, report the % recovery as a percentage (without the percent symbol) in the "MeasuredValue" field. Note that surrogates and internal standards are included as analytes in the AnalyteID list. **No data should be reported for field samples that fail to meet the surrogate and/or internal standard % recovery criteria listed in the method for that field sample. No data should be reported for field samples where QC samples fail to meet any QC criteria listed in the method for that extraction and analysis batch.** Some methods require the % recovery to be checked against both the initial calibration curve and the most recent CCC. The text file will only contain the % recovery calculated based on the initial curve. (Laboratories are expected to check the % recovery both ways, if required by the method. The second check will not be reported directly to EPA, but should be maintained with the electronic sample file.)
3. Data for the LFSM and LFSMD should be reported using the same criteria as for field samples (i.e., associated CCCs, LRB, LFB, IS, and Surrogate recoveries must all meet QC criteria.). If the % recovery or precision criteria for LFSM or LFSMD are listed in the method, these should not be applied when deciding whether to report the data. If the FS fails to meet QC criteria, but the associated LFSM and LFSMD do meet QC criteria, then the LFSM and LFSMD should be reported in the text file even though the FS will not be reported; the precision of these two QC analyses are relevant to the remaining samples in the batch.
4. Field blanks must be analyzed if a target contaminant is found in a field sample. The FB must have no interference or contaminant measurement >a MRL. FBs that fail this QC

criterion invalidate field samples collected with that FB, and both the FB and the field sample need to be recollected, but should still be reported. FBs that fail the QC criterion must be reported with the actual contaminant MeasuredValue. FBs that pass this QC criterion must be reported with the contaminant MeasuredValue as zero (0).

B. Supporting QC Data to report (non-billable samples):

1. In addition to the billable samples, **EPA requests the results from CCC, LFB, LRB, and EQC samples that support the acceptance of the data for the billable samples.**
2. The appropriate number and concentration of CCCs should be included in each batch in order to demonstrate that a low level CCC (MRL or less) and at least one mid level CCC were analyzed and met QC criteria. If an analysis batch contains more than 10 FSSs, three CCCs must be included for the analysis batch. If an analysis batch contains 2 CCCs with the same true value concentration, then each CCC must be given a unique name for the SampleKitID field. If the CCCs do not have unique SampleKitIDs assigned by the laboratory, only one CCC will be uploaded into our database.
3. An LFB is required at or below the MRL with each analysis batch and must be reported. Additional LFBs at higher concentrations are encouraged and should also be reported when analyzed.
4. An LRB is required with each analysis batch and must be reported.
5. If an EQC is analyzed with a batch of samples, then the data from it should be reported.

No other non-billable QC samples for any method need be reported routinely to EPA. Laboratories must recognize that through reporting these field sample data they are acting in good faith and they have submitted to EPA valid results which have passed all method required QC criteria. These unreported QC data will be inspected during technical system audits.

IV. Communication

Once the text file is created, it must be submitted electronically as a deliverable to TSC as a correctly configured text file in an email attachment to: TSC-UCMR.CI@epa.gov. Include the text file name in the subject line of the email.

You should expect to receive a confirmation message when your file has successfully been loaded into the TSC data system. You will also be informed if errors exist in the submitted text file, and you will be asked to resubmit a corrected file. Chronic problems with uploading your laboratory's text files will reduce your contract performance rating in the annual contract

Contract EP-C-13-004 – Babcock Laboratories, Inc.
Attachment 2 Text File Specifications

performance report submitted by the Project Officer.

V. Example Tab-Delimited Text File (specific to Method 539)

For illustration in this example, tabs are replaced with * and the end of line hard return is replaced by ¶. A null field is represented where two or more adjacent tabs (***) or a tab adjacent to the end of line hard return (*¶) are displayed.

MONTHLY PROGRESS & QUALITY CONTROL ASSESSMENT REPORT

June 2014

Kim S. Tree Laboratory: OH12345

Contract # EP-C-12-001

A. MONTHLY PROGRESS REPORT

1. Monthly and cumulative fund totals

Task Order #	Original Amount (\$)	Available Funds From Previous Month (\$)	Amount Claimed This Month (\$)	Amount Obligated For Work In Progress (\$)	Available Funds Remaining (\$)
01	140,000	0	0	0	0
02	210,000	5,000	5,000	0	0
03	224,000	218,000	15,000	20,000	183,000

2. Monthly and cumulative kits received totals

# of Valid Kits Received This Month	# of Invalid Kits Received This Month	Total # of Valid Kits Received Under Contract	Total # of Invalid Kits Received Under Contract
139	1	1825	38

3. A summary of the number of samples analyzed, percent of samples analyzed that met all required quality control requirements and the average elapsed time between sample collection, extraction, and analysis for the month is included in the following table:

Method	# of Samples Analyzed	# That Met All QC Requirements	Average Elapsed Time (Days) Between:	
			Collection & Extraction	Collection/Extraction & Analysis
200.8	13	13	NA	5.0
218.7	15	15	NA	6.0
300.1	12	12	NA	5.0
522	15	15	5.0	5.0
524.3	15	15	NA	5.0
537	16	15	5.0	8.0
539	15	15	5.0	9.0
Total	101	100		

4. The number and type of billable samples per task order for the month are included in the following tables:

Task Order 01 (Complete)

Task Order 02					
Method	Field Samples	LFSM	LFSMD	FB	Total
200.8	5	1	1	1	8
218.7	5	0	0	0	5
300.1	2	0	0	NA	2
522	5	0	0	NA	5
524.3	5	0	0	0	5
537	0	0	0	0	0
539	0	0	0	0	0
Total	22	1	1	1	25

Task Order 03					
Method	Field Samples	LFSM	LFSMD	FB	Total
200.8	5	0	0	0	5
218.7	9	0	0	1	10
300.1	8	1	1	NA	10
522	10	0	0	NA	10
524.3	10	0	0	0	10
537	10	1	1	3	15
539	10	1	1	3	15
Total	61	3	3	8	75

5. The number of billable samples per task order still available for each method:

Task Order 01 (Complete)

Task Order 02						
Method	Original # of Samples	# of Samples Remaining From Previous Month	# of Samples Billed This Month	# of Samples in Progress	# of Samples Outstanding From Schedules	Total # of Samples Remaining
200.8	150	8	8	0	0	0
218.7	150	5	5	0	0	0

Contract EP-C-13-004 – Babcock Laboratories, Inc.
Attachment 3: Example Monthly Report

300.1	150	2	2	0	0	0
522	150	5	5	0	0	0
524.3	150	5	5	0	0	0
537	150	0	0	0	0	0
539	150	0	0	0	0	0
Total	1050	25	25	0	0	0

Task Order 03						
Method	Original # of Samples	# of Samples Remaining From Previous Month	# of Samples Billed This Month	# of Samples in Progress	# of Samples Outstanding From Schedules	Total # of Samples Remaining
200.8	160	160	5	10	30	115
218.7	160	160	10	20	40	90
300.1	160	160	10	10	30	110
522	160	160	10	15	40	95
524.3	160	160	10	15	40	95
537	160	145	15	15	40	75
539	160	145	15	15	40	75
Total	1120	1090	75	100	260	655

Lab Capacity Certification: Kim S. Tree Laboratory understands our current Task Orders have limited sample analysis capacity. We will not process any samples we receive that exceed Task Order capacity. Our current lowest remaining method balance includes 75 of 160 analyses ordered (Method 537 & 539) representing 47% remaining sample capacity. Our laboratory will notify EPA when any method balance falls to 25%. We acknowledge and understand that processing samples beyond our task order capacity will result in an unauthorized commitment and we will not be able to report those results or receive payment for those analyses.

B. MONTHLY TASK ORDER REPORT

During the month of June 2014, 101 List 1 samples were analyzed. Of these kits one (1) was received out of temperature making one or more methods invalid. Also, one (1) of these kits experienced a QC error for method 537 and the data was not submitted for that method. Therefore, only 100 samples were analyzed and submitted for payment.

During the month of June, these were the kits analyzed, reported and invoiced for payment.
